Lesson Quick Study

Lesson 1 - What Can We See in the Sky?

1. Inquiry Skill Practice–Communicate

Draw a picture of the sky at night. Label the objects you drew. Communicate with a friend about your picture.

Drawings will vary but should include details of a nighttime sky such as the moon, stars, or possibly planets.

Possible answer: star

Possible answer: moon

Possible answer: planet

2. Use Vocabulary

Complete each sentence.

The **sun** is Possible answers: a star; bright in the sky; close to Earth.

A **star** is Possible answers: an object in the sky; bright in the sky.

The **moon** is Possible answers: a ball of rock; bright with light from the sun.

3. Compare and Contrast

Use this chart with the Lesson Review.

Daytime and Nighttime Sky

alike	different
In the daytime and nighttime sky, you can sometimes see clouds and the moon.	In the daytime sky, you may see (A) clouds and the sun.
	In the nighttime sky, you may see (B) stars, planets, and the moon.
	In the daytime, the (C) sun gives off light.
	In the nighttime, the stars give off light, but the (D) moon does not.

4. Critical Thinking and Problem Solving

On a cloudy night, it can be hard to see stars in the sky. Why do you think this is? Write to explain.

Possible answer: Clouds block the light from the stars.
